

Craft Technique Sequin Technique

Instructions No. 1271

With the **handicraft technique Sequin technique** decorative glitter objects are created by using a **Polystyrene figure** with Handicraft paint and coloured sequins. What looks like endless effort for the observer is a particularly relaxing hobby with fascinating results for the connoisseur

And it is as simple as that:

With the **Sequin technique** always colored Sequins with as short Pins as possible are put into a polystyrene body, so that complete colored areas are created **The Polystyrene figure can be completely covered with Sequins or only partially**. Sequined areas can be combined very well with the felt technique and with coloured paintings. Exactly these combination possibilities make the charm of Sequin technique . In any case, the procedure is as follows:

The Polystyrene figure is divided into different areas with the help of a sign pen

First, take the areas that begin with **Handicraft paint** be painted. Prime these areas and paint them with faces, for example.

Are certain areas suitable for the Felting?

After the Handicraft paint is dry, take a little Knit felting wool (fairy tale wool), put it on the Polystyrene figure and connect the Polystyrene with the wool by piercing the wool with a felting needle into the form.

How does the actual Sequin technique work ?

Into the areas that are to be completely covered with Sequins , now place the Sequins with the help of Pins close together. Start at the outer contour of the surface and work in "sequin rows". This results in a particularly good look.

In this way, a small, really unique Sequin technique-work of art is created bit by bit.
